

ORGANIZATIONAL ISSUES OF EDUCATION OF YOUTH IN A MILITARY - PATRIOTIC SPIRIT

Aripova Matluba Lutfullaevna - Candidate of Pedagogical Sciences, Associate Professor. Uzbekistan State University of World Languages.

Abstract: The main goals and tasks aimed at educating young people in the military-patriotic spirit, the work done, some shortcomings in this direction, methods and methods of their elimination, effective work carried out in cooperation with ministries and agencies, national pride in the growing young generation, mother Our work on the formation of loyalty to the country and feelings of patriotism ultimately consists of forming young people who are patriotic, devoted to their profession and mature in all aspects for all areas of our country.

Key words: love for the motherland, national loyalty, youth, military-patriotism, education, institution, memorandum, system.

Enter. Patriotism means a person's love for his country and his desire to preserve it. Our forefathers, great-grandfathers and scholars set great examples of expressing love and loyalty to the Motherland. Ahmad Farghani, Muhammad Khorazmi, Abu Rayhan Beruni, Abu Nasir Farabi, Imam al-Bukhari, Imam al-Tirmizi, Abulais Samarkandi, Burkhaniddin Marginani, Abul Mu'in Nasafi, our great thinkers connected their nicknames with the land where the blood of the navel was spilled and made its name known to the world. is also an example. Patriotism is manifested in feelings such as loving the Motherland, being proud of it, rejoicing over the achievements of the country, and worrying about its prospects.

Analysis of literature on the topic (Literature review). The President of the Republic of Uzbekistan, the Supreme Commander-in-Chief of the Armed Forces, while noting the achievements made in building up our armed forces, said, among other things: deeply aware of its importance, we set further strengthening of the defense potential of our country and the development of our Armed Forces as one of the priorities. Also, on December 25, 2020, in Tashkent, the President of the Republic of Uzbekistan said at the Youth Forum of Uzbekistan: "Based on my experience, my advice to you is this: Appreciate science, strive for science!" Don't waste a second of your time! Youth is the most precious period of life. Never forget that science and knowledge are wealth that does not burn in the fire, does not sink in the water, and no one can take it from you!" he encouraged the youth.

Education in the spirit of military patriotism is a component of educational work, and it is the process of forming a high sense of defense, political, moral and psychological qualities, acquiring military and technical knowledge, and physical improvement of a person, necessary for protecting the Motherland.

Education of young people in the spirit of military patriotism is the goal of state and non-state organizations, family, neighborhood, educational institutions aimed at forming young people's feelings of love and loyalty to the Motherland, educating them as individuals capable of fulfilling their civic duties and constitutional obligations, protecting the interests of the state and society. systematic and coordinated activity.

In fact, today the world is rapidly changing, political, economic and ideological struggles between regions and countries are becoming increasingly intense, and the scope of external and internal threats to the minds and hearts of our country's youth is also expanding.

In particular, the negative vices such as immorality, hooliganism, selfishness, indifference, entertainment, as well as threats such as religious extremism, "popular culture" and drug addiction have a serious negative impact on the education of our youth.

In the conditions of such negative changes in the education and behavior of our youth, the head of our state, Shavkat Miromonovich Mirziyoev, from the first days of assuming the office of the president, specifically recognized the urgent importance of educating the representatives of the younger generation in the spirit of military patriotism, and determined the need to introduce an effective integrated system in this direction.

Until 2017, the following systemic problems were observed in the education of young people in the military-patriotic spirit in our country, including:

1) the concept of raising the young generation in the spirit of military patriotism and the integrated system of education did not exist in our country;

2) the coordinating body for work in this direction has not been established at the republican level, the role and importance of state and non-state organizations, family, neighborhood, educational institutions has not been determined;

3) measures to educate young people in the spirit of military patriotism are mainly limited to military demonstrations during the celebration of holidays or organization of excursions of young people to military units and institutions;

Based on the above, a vital need was felt to systematize the education of young people in the military-patriotic spirit in educational institutions, neighborhoods and organizations, and in military units based on a fundamentally new approach.

Resolution No. 140 of the Cabinet of Ministers of the Republic of Uzbekistan dated February 23, 2018 "On approving the concept of educating young people in the military-patriotic spirit" was adopted in order to systematically solve these urgent issues.

With this, taking into account the importance of forming a firm life position and a high sense of responsibility for the fate of our country in our young generation, the full-fledged activity of the military-patriotic education system, which covers from preschool to higher educational institutions, as well as neighborhoods and organizations, was launched in our country.

As a result, the military-patriotic education of the youth of our society increased significantly, and in 2019, 14-15 candidates for admission to the Temurbek School, 12-13 for higher military educational institutions, and 10-11 candidates for military service.

The goal of educating young people in the spirit of military patriotism is to inculcate social, spiritual and moral qualities in young people that encourage them to serve the Motherland faithfully, preserve the country's peace, be active for the development of the Motherland, and create a pool of enthusiastic, honest, dedicated and mature personnel for all areas of our country. consists of formation.

Based on the goal of educating young people in the military-patriotic spirit, the following tasks are defined:

- formation of high patriotism and loyalty to the Republic of Uzbekistan, its people and its President in young people;

- to strengthen the active life position and firm belief of young people, their responsibility for the fate of the Motherland, to strengthen their ideological immunity to informational and psychological attacks of various forms;

The system of educating young people in the military-patriotic spirit is a set of interrelated, complementary and collaborative political-legal, socio-economic, ideological-ideological and cultural-educational activities.

This system consists of the following components:

- preschool education, general secondary education, secondary special education and higher educational institutions aimed at forming and developing our ancient history, national customs, traditions and values, the spirit of love and loyalty to the Motherland in the educational process;

The main objects of education of young people in the military-patriotic spirit are the following: students of pre-school educational institutions; students of general secondary educational institutions; students of secondary special educational institutions; students of higher education institutions; cadets and trainees of higher military educational institutions; military service youth; young people working in enterprises and organizations; unorganized youth.

The main principles of educating young people in the military-patriotic spirit are openness and transparency, scientificity, historicity, accuracy and promptness, regularity and activity, harmony of the educational process, support and encouragement of youth initiatives and interests, reliance on the achieved positive results, etc.

The forces involved in educating young people in the military-patriotic spirit are: military personnel; military pensioners; reserve military personnel; propaganda groups of military units and

institutions; higher military educational institutions; departments and departments of defense affairs; "Schools of Temurbeks"; lyceums oriented to the military unit.

The means of educating young people in the spirit of patriotism are the following: weapons and military equipment; educational simulators, specially equipped classrooms, rooms and places; military uniforms and special equipment; visual and informational materials (slides, infographics, synopsis, etc.); promotional materials (banner, poster, panel, flyer, etc.); documentaries, specials and movies; military-patriotic literature; electronic and printed information sources (internet, newspaper, magazine, etc.).

The main forms of educating young people in the military-patriotic spirit: lectures, roundtable discussions, seminars, conferences, meetings, live communication, educational and cultural evenings, concerts and exhibitions, excursions, marathon festivals, military-sports games, competitions, exhibitions and presentations, contests, quizzes, documentaries and feature films, film screenings and more.

During the visit of the head of our country to the Surkhandarya region, a comprehensive program of measures was adopted with the relevant decisions of the governors of all regions of the republic in connection with the tasks given by the head of our country to educate the youth of the region in the spirit of military patriotism and to raise the morale of military personnel based on the ethno-cultural values of the region. attached to parts.

During the past short period, the MIA Academy introduced the following unique work algorithm for educating young people in the spirit of patriotism:

1) in order to organize systematic work with young people, the population is divided into categories according to administrative regions, and young people are separated from among them, including organized, unorganized, and young people who have gone abroad for a long time;

2) in working with organized youth, a single mechanism, forces and means of cooperation with the Ministries of Preschool Education, Public Education, Higher and Secondary Special Education, the Youth Union of Uzbekistan, the Republican Spirituality and Enlightenment Center are being defined;

- Research methodology (Research Methodology). At this point, it would be appropriate to analyze the factors of increasing patriotism in foreign countries, including European countries, and their experiences. In Europe, due to historical reasons, most countries use the invisible patriotism education method. For example, in schools, based on the position that history and patriotism are inextricably linked, various historical competitions are held. In Turkey, when studying the activities in the field of education for young people, first of all, it is necessary to determine the ideological direction of the state in this regard. At the same time, we also see the ideology that the state wants to persecute among the youth. The ideology of national education in Turkey is the liberation struggle against imperialism and invaders, the establishment of the Oliy Millat Majlis, the fall of the monarchy and the Ottoman Caliphate, the proclamation of the Republic, the implementation of a one-party system based on the Republican People's Party, the banning of the Communist Party, the closure of the Communist Party, and a number of such events. the winner was Mustafa Kemal Atatürk and the Republican People's Party, where he was the leader. Thus, Atatürk and the RXP played a decisive role in the creation of a new people's state. "Kemalism" was announced as the official ideology of the new Turkish Republic. That is why the ideology of national education in Turkey is a sign of Kemalism.

-Analysis and results (Analysis and results). Based on the above, the effectiveness of educating young people in the military-patriotic spirit has a positive effect on the minds and hearts of young people, has increased their activity in realizing their intellectual, creative and professional potential, has made them aware of their civic duty and responsibility for the protection and security of their independent Motherland. determined by the formation of a position of always being ready for any service in the interests of the state and society. The expected result of educating young people in the spirit of military and patriotism is that young people with a high sense of patriotism, modern knowledge, strong will and a firm life position will enter higher education, higher military educational institutions, perform military service under a contract in the ranks of our national army, and work in state bodies and in the business sector. consists of

In addition to the effective work carried out in cooperation with the ministries and agencies regarding the education of young people in the spirit of patriotism, the existence of systemic deficiencies in this direction has its effect on the fulfillment of the joint goals:

Including:

1) in 9711 general education schools in our republic today, 2197 pre-primary teachers are appointed from retired military personnel, and this indicator is only 22.6 percent. It can be seen from this that in the regions, it is poorly organized to attract highly educated, skilled and experienced IIO employees and retired military personnel to teaching positions in educational institutions.

Based on the above, in order to educate the young generation in the spirit of patriotism, it is necessary to accelerate the appointment of IIO pensioners or persons who have retired from military fields to the positions of directors of local secondary schools and teachers of primary military training;

2) spiritual-educational and public events held with young people in various remote areas, villages and villages of our republic are mainly organized by the initiative of departments and services and institutions of the Ministry of Internal Affairs. However, regional management bodies are also responsible for the organization of these events.

Taking this into account, it is desirable for each organization to organize relevant activities not based on ready-made old templates, but in a completely new form, based on a systematic approach, take the initiative, and strengthen cooperation with the military and the IIO;

Conclusion and recommendations (Conclusion/recommendations). It can be said that the work we are doing to increase the feelings of national pride, loyalty to the motherland, patriotism, and national glory in the young generation will ultimately serve to form patriotic, selfless and mature young people for all sectors of our country.
